Subject: Images for VR Conference Proceedings  
X-Mailer: <PC Eudora Version 1.4b17>

I need a stereo-pair set of images which show the integrated Vis/Mosaic  
demo, grabbed from the screen and converted to TIF. I need this by 12  
noon  
today. There should be enough text around the Vis window so that it is  
obvious that it is embedded in a true Mosaic document. The stereo pair  
should show the embryo rotated about 6 degrees between the two images.  
Cheong, just as we have done in the past.
